SEVERE FIRE WEATHER IN NORTHWEST

DROUGHT EXTENSIVE

Cumulative dry conditions in Montana, Central Washington and Oregon and Northern California set the stage for a severe fire season. Drought areas are shown graphically on map below.

DROUGHT - SUMMER 1973
(PALMER INDEX)

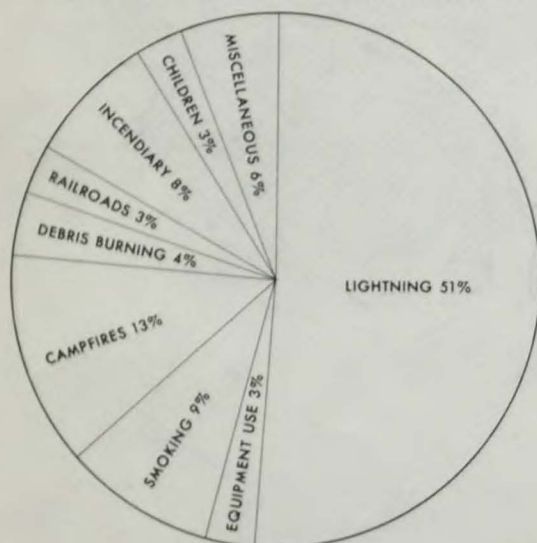

FIRE OCCURRENCE

Although thunderstorms and lightning strikes were less than normal in the drought area, during a three-day period in August lightning ignited 387 fires in Idaho and Montana. Fires were persistent and difficult to suppress.

TOTAL FIRES AND ACRES BURNED - NATIONAL FOREST PROTECTION

ATTAINMENT

In 1973, 95 percent of all fires were controlled at 10 acres or less in size on 204 million acres of Forest Service protected lands. Less than one percent were large fires burning over 300 acres. These accounted for approximately 90 percent of burned acreage. Forest fires burned 0.8 acres for each 1000 acres protected.

BOISE INTERAGENCY FIRE CENTER

"...the goal being more effective control of forest and range wildfires."

COOPERATION IMPORTANT IN 1973

The Boise Interagency Fire Center demonstrates the cooperative spirit of Federal and State agencies working together to reduce fire losses. BIFC played a major role in 1973 in implementing the total mobility concept. This was exemplified in mid-August 1973 as 11,000 men were mobilized to combat over 70 major fires in the Western United States. While the Northwest experienced the worst drought in 30 years, State and Federal agencies kept losses to less than 200,000 acres. This was a remarkable feat considering there were 2500 fires which occurred during this period.

AIR ATTACK

Forest Service smokejumpers made 3,242 jumps on 719 fires. Helitack crewmen assaulted 2,952 fires. Large helicopters were especially effective in delivering firefighters, retardant, and equipment. Helicopters operated 27,933 hours on fire control activities; fixed-wing aircraft flew a total of 64,428 hours. Airborne units with infrared equipment provided accurate fire location maps for numerous large fires.

THE ROLE OF FIRE IN WILDERNESS MANAGEMENT

A wilderness fire management plan has been developed by the U. S. Forest Service to allow for a more natural role for fire in wilderness areas. The first plan was developed for the White Cap Drainage for the Selway-Bitterroot Wilderness, Bitterroot National Forest, Idaho. The plan describes modified suppression actions based upon fire history, ecological analysis and seasonal weather patterns. Last summer, the driest since 1933, proved to be a real test of the plan. The Fritz Creek Fire started in the Wilderness on August 10, 1973, and burned for 43 days. The final size of the fire was 1200 acres. The fire was allowed to burn under the prescription guidelines developed for the White Cap fire management area.

THE ANNUAL FIRE REPORT FOR THE NATIONAL FORESTS IS A COMPILATION OF STATISTICS FOR ALL FOREST FIRES OCCURRING ON NATIONAL FOREST LAND AND OTHER LANDS PROTECTED BY THE FOREST SERVICE.
